

Restaurant Manager — Analytics Dashboard Journey

Project Overview

Project Title	Food Ordering Behaviour and Customer Trends
Repository	Food-Ordering-Analytics-Dashboard
Website	Flask web application with an embedded Tableau Dashboard and Tableau Story
Team Members	David Goyar (Team Lead) • Ravi Sharma • Kartik Gupta • Harsh Naruka

Project Description

The project analyzes approximately 50,000 food ordering records using Tableau Public. It delivers business insights through an interactive Tableau Dashboard and Tableau Story, both embedded in a Flask-based web application.

The dashboard covers the following areas:

- KPI Dashboard
- Cuisine Demand Analysis
- Revenue Analysis
- Customer Rating Analysis
- Delivery Time Analysis
- Meal Type Analysis
- Restaurant Segment Analysis
- Customer Age Group Analysis
- City-wise Order Analysis
- Interactive Filters

Its objective is to help restaurant owners, managers, and business analysts understand customer ordering behaviour and make informed business decisions.

Customer Persona

Primary User	Restaurant Manager
Age	35–45 years
Occupation	Restaurant Manager
Experience	Manages day-to-day restaurant operations and overall business performance.

Goals

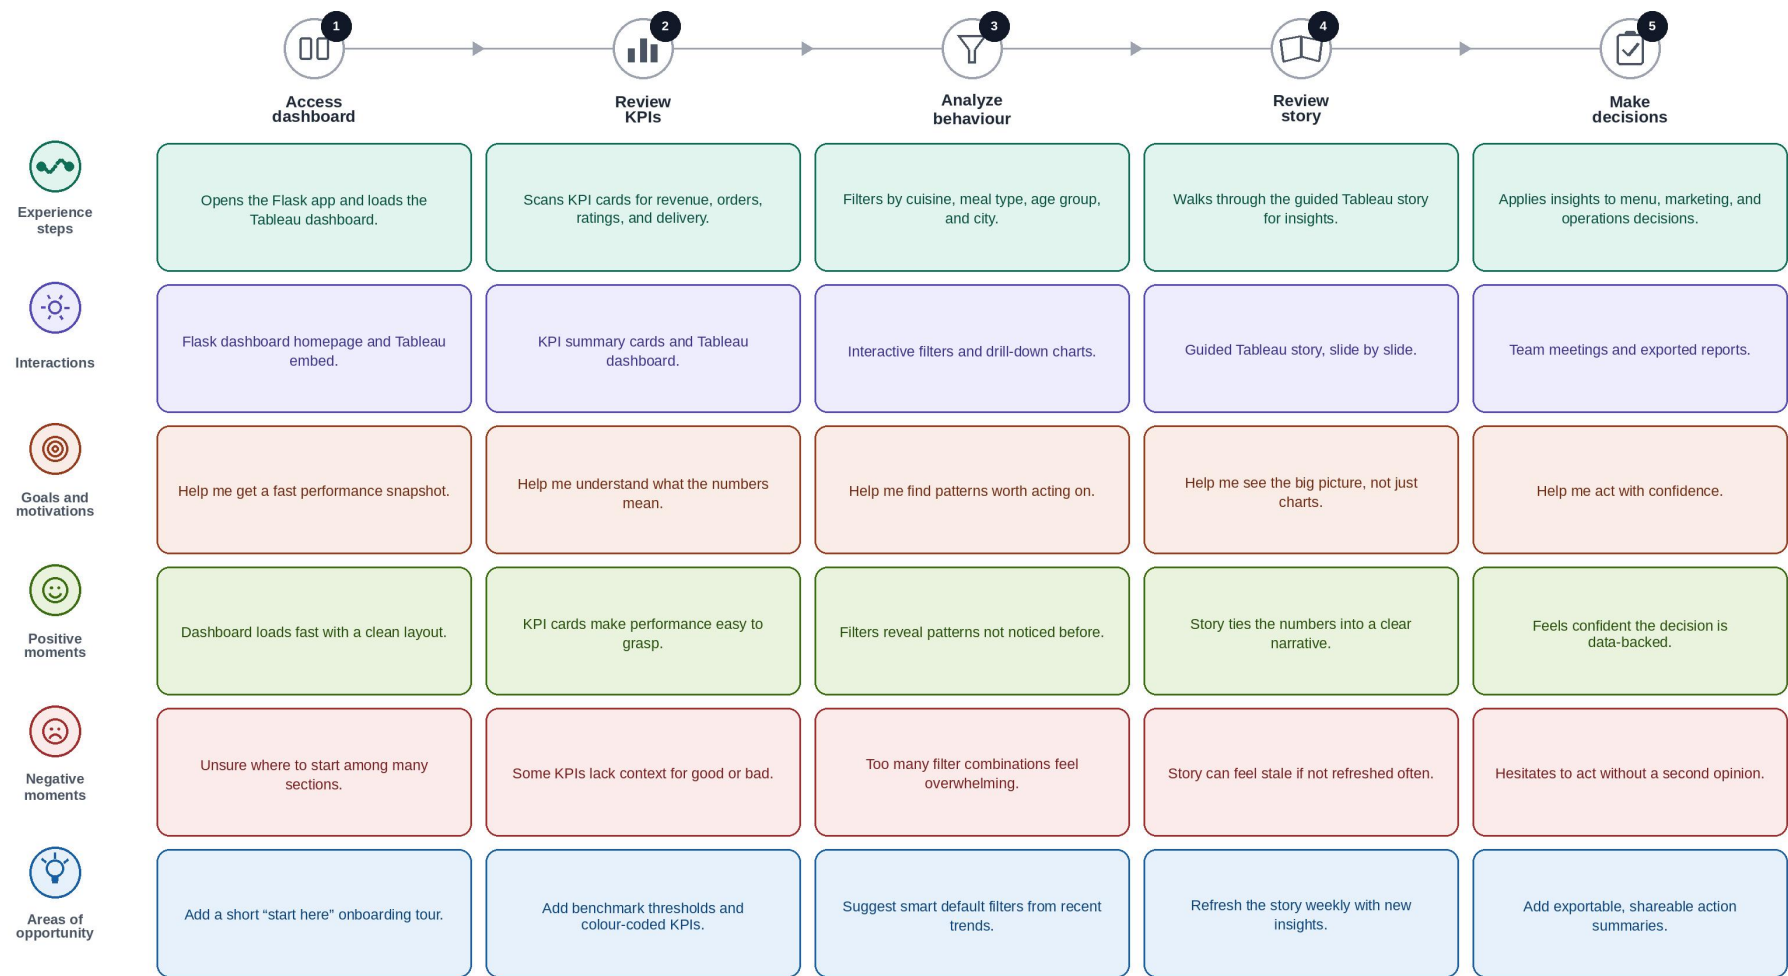

- Understand customer ordering behaviour.
- Monitor revenue and key performance indicators.
- Identify popular cuisines and demand patterns.
- Improve customer satisfaction.
- Optimize overall business performance.
- Make data-driven decisions.

Challenges

- Large volumes of raw operational data.
- Difficulty identifying business trends manually.
- Limited visibility into customer preferences.
- Time-consuming manual reporting.

CUSTOMER JOURNEY MAP

Dashboard Analytics Journey – Five Stages

Prepared as part of the Food Ordering Behaviour and Customer Trends capstone project.
